Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

Claim 1 (currently amended). A method for determining an optimum access strategy in a configuration for data processing ~~data processing processes~~, the method which comprises:

providing the configuration for data processing data ~~processing processes~~ with an operating system allowing system processes to be executed with at least one system resource to ~~process system processes~~ when an application is carried out, the system resource being a main memory;

using different access strategies with the system resource to carry out an application or execute a system process, using ~~different access strategies to process an application or a system process~~ whereby an access strategy can be leaving open banks of the main memory after a first access or closing the banks of the main memory after the first access;

after testing all of the access strategies, assigning a value corresponding to an execution speed of the application or the system processor to each of the access strategies; and

storing the value.

Claim 2 (original). The method according to claim 1, which further comprises: enabling a user of the system to determine an optimum access strategy at any time.

Claim 3 (original). The method according to claim 1, which further comprises:

providing a plurality of system resources; and

determining an optimum access strategy for each individual one of the plurality of system resources.

Claim 4 (original). The method according to claim 1, which further comprises:

providing a plurality of system resources; and

for an application, determining a uniform optimum access strategy for all of the plurality of system resources.
